

Dumpster Rental FAQ's

Will a roll off dumpster damage my driveway or pavement?

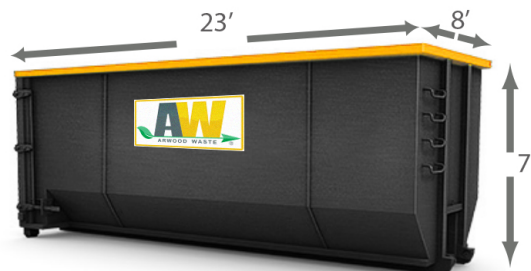

A full roll off dumpster can be very heavy depending on its size and the type of materials that are placed inside the container. Thus, we highly recommend customers take any necessary actions to prevent any potential damage to driveways and pavements by placing a 4' x 8' sheet of plywood on the driveway where the container will be placed. The customer affirms that any right-of-way provided by customer (disclosed in delivery questions) for the roll off container is sufficient to bear the weight of all contractors' dumpster equipment and vehicles required to perform the contracted service. The customer assumes all liabilities for damages to private driving surfaces, pavement or road surfaces and entire roll off container placement site. The 123 Dumpster and its affiliates shall not be responsible for any damages to any private driving surface, pavement or accompanying subsurface of any route associated to perform the service that was contracted.

Can the dumpster be placed on the street?

Permits may be required. Please check with your local municipality for specific rules and regulations.

Is it necessary for someone to be on location when the dumpster is delivered or removed?

It is not necessary to have someone on site for delivery or removal of the dumpster. However, please be as detailed as possible when answering the delivery questions, as the driver will use their judgment and place the dumpster in the safest accessible area. If an onsite contact is not available for delivery, you will be responsible for all charges involved with relocation of the dumpster should it be necessary. For removal; customer agrees to provide unobstructed access to the dumpster on the scheduled pick-up day; if dumpster is inaccessible, customer is subject to additional pick-up charges, as terms and conditions apply.
